Stanford, California

Dear Josh,

I'm thinking of coming down to Stanford on Monday Jan. 29, more or less to hear R.P. Levine. Do you think you might have a few minutes sometime earlier in the day to discuss (1) our cytoplasmic DNA presumably-in-the-chloroplasts-data (2) chloroplasts as endosymbionts in general and (3) my proposed explanation of Sagers non-chromosomal sr-500 and sd system? I'd welcome the opportunity to talk to you any other time if this is not acceptable and I'll be glad to make a point of driving to Stanford if you'd rather some alternative date.

Regards to Esther, fondly,

Lynn Sagen

Lynn Sagen

P.S. Just me, not Stanley Schen.

Dear Lynn -

You picked a specially busy day (we're leaving for Mexico Tuesday) but I'll be glad to try to see you, either about 3³⁰ my office or just after seminar. $P \approx 0.5$
